

## **Common Ferns of the Midwest**

\*Caution-This is a limited species key  
NWPL

1. Ferns with dimorphic fronds with distinct sterile and fertile leaflets separate on one frond or as two separate and distinct fronds\*.   
 2. Ferns with two separate types of fronds (dimorphic), sterile and fertile.
  3. Ferns with leaflets once cut\*.....*Onoclea*
  3. Ferns with leaflets twice cut\*.
    4. Fronds grow from a blackish knobbed base, stems and leaflets mostly lacking hairs.....*Matteuccia*
    4. Fronds lacking blackish knobbed base, stems and underside of leaflets very hairy.....*Osmundastrum*
  2. Ferns with fronds that have sterile and fertile leaflets on the same frond.
    5. Fern leaflets cut twice.....*Osmunda*
    5. Fronds cut once.
      6. Stalk green; all pinnae with a thumb-shaped base .....*Polystichum*
      6. Stalk dark brown; basal pinnae with a thumb-shaped base .....*Asplenium*

1. Ferns with only one type of frond, fertile and sterile fronds and leaflets similar, sometimes the fronds of an individual fern may lack any fertile sori.
  7. Fronds twice cut.
    8. Lower two pinnae (leaflets) pointing downward .....*Phegopteris*
    8. Lower two pinnae more or less at right angle to stem.
      9. Fronds mostly broadest at base, stem wire-like and black, leaf edges rolled .....*Thelypteris*
  9. Fronds tapered at both ends, stems thin, brown to green.....*Parathelypteris*

Φ USDA-NRCS PLANTS Database / Britton, N.L., and A. Brown. 1913. An illustrated flora of the northern United States, Canada and the British Possessions. 3 vols. Charles Scribner's Sons, New York. Vol. 1: 32.

7. Fronds thrice cut.

10. Fronds with very scaly bases.....*Dryopteris*

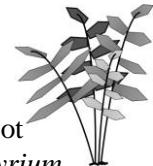

10. Fronds with very few scales or scales lacking.

11. Fronds divided from the base, forming a cluster of fronds.

12. Fronds wider than 6 inches and taller than 1 foot

.....*Athyrium*

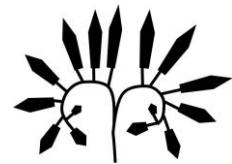

12. Fronds smaller than 6 inches wide and 1 foot tall

.....*Cystopteris*

11. Fronds divided from a central stalk and/or from near base but not forming clusters of fronds.

13. Fronds divided into a circular or semi-circular shape with black forked stalks, 1 - 1.5 feet tall

.....*Adiantum*

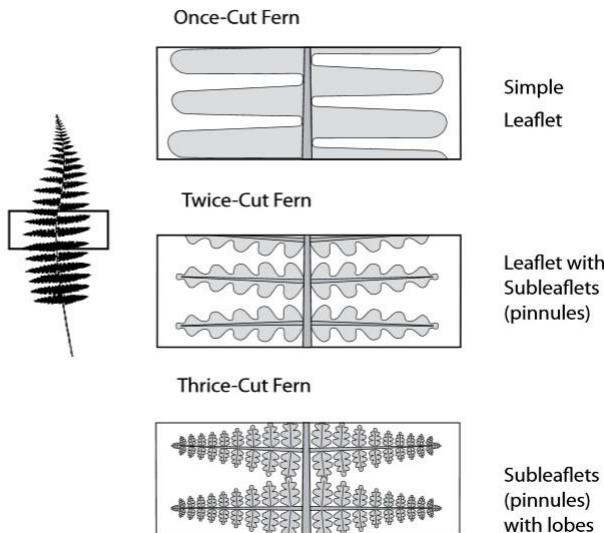

13. Fronds divided into a three parted triangle

stalks green to pale brown; 1.5 – 5 feet tall

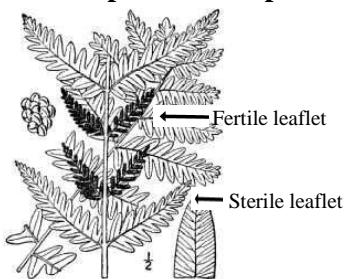

.....*Pteridium*

- \* Frond(s) is equal to saying leaf or leaves. The smaller leaf units on a frond are referred to as pinnae or leaflets. See below for types of dimorphic fronds.

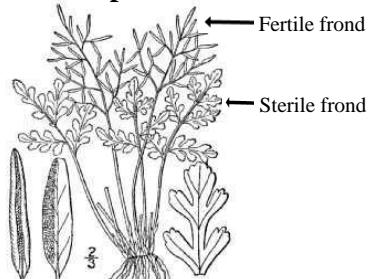

## Leaflet Shapes

### Dimorphic leaflets/pinnae

### Dimorphic fronds

USDA-NRCS PLANTS Database / Britton, N.L., and A. Brown. 1913. An illustrated flora of the northern United States, Canada and the British Possessions. 3 vols. Charles Scribner's Sons, New York. Vol. 1: 32.

## Species Key:

1. Sori near leaflet margin (Fig. A).....*Dryopteris marginalis*
1. Sori in between leaflet margin and midvein (Fig. B).
  2. Fronds green through winter.....*Dryopteris intermedia*
  2. Fronds dying in winter
    3. Fronds twice to thrice cut at base.....*Dryopteris carthusiana*
    3. Fronds once to twice cut at base.....*Dryopteris cristata*
